PROFESSIONAL SUMMARY

Data Scientist with 5+ years building ML models for classification, regression, NLP using Python and PySpark. Experienced in Stars analytics, medical and pharmacy claims, EHR, and SDOH data across Snowflake and Databricks. Skilled at translating complex data science findings into executive-level recommendations that drive value-based care outcomes.

EXPERIENCE

United Healthcare Group | Data Scientist

10/2025 – Present

- Built binary classification models in Python on medical and pharmacy claims data, supporting HEDIS/Stars initiatives and reducing hospital readmissions by 12%.
- Communicated ML model findings and value-based care recommendations directly to executive stakeholders, translating complex outputs into actionable clinical interventions.
- Analyzed EHR, claims, and SDOH datasets in Snowflake to identify care gaps and utilization patterns supporting Stars quality measure improvement.
- Engineered PySpark and AWS Glue pipelines ingesting 500GB+ daily clinical records, reducing data processing latency by 35% for near real-time reporting.
- Applied NLP to unstructured clinical notes and vendor-derived data, enriching risk stratification model features for high-risk patient identification.
- Maintained CI/CD pipelines and Git version control for ML model lifecycle, ensuring reproducible and production-ready data science deployments at scale.

University of Memphis | Research Data Scientist

01/2024 – 09/2025

- Designed Python threat simulations for DHS-backed NCPC program, generating 5,000+ attack scenarios used by 120+ trainees in distributed network environments.
- Built anomaly detection visualizations using Pandas and Matplotlib, cutting incident analysis time from 45 to under 8 minutes.
- Engineered automated pipelines processing 3GB+ daily distributed system logs, enabling real-time identification of risk patterns and threat vectors.

Capgemini | Data Scientist

01/2022 – 12/2023

- Built ML models, Python, SQL ETL workflows, processing high-volume datasets, delivering analysis-ready feature tables for enterprise-level predictive reporting.
- Instituted anomaly detection and data quality controls, ensuring accuracy and consistency across operational reporting systems serving cross-functional teams.
- Automated KPI refreshes and scheduled data loads, reducing manual reporting effort by 40% and accelerating insight delivery cycles within the organization.

Tech Mahindra | Data Analyst

09/2020 – 12/2021

- Developed 15+ Tableau and Power BI dashboards, transforming complex multi-source datasets into executive-ready narratives, improving analytical decision-making efficiency.
- Optimized complex SQL queries and tuned database performance, enhancing accuracy and speed of software analytics reporting across production datasets.
- Automated data validation workflows using Python and Apache Airflow, ensuring high data quality and pipeline reliability across recurring analytical processes.

PROJECTS

Sales & Customer Analytics Dashboard

- Developed an end-to-end interactive Power BI dashboard to visualize \$34M in total sales and performance trends for a global distributor, achieving a 60.3% profit margin.
- Engineered robust data models using SQL and Python to consolidate multi-source datasets into clean, analysis-ready tables, improving data reliability for financial reporting.

Healthcare Risk Stratification Model

- Built XGBoost binary classifier stratifying patient risk using claims-like features, producing actionable cohort insights aligned with HEDIS quality frameworks.
- Engineered feature pipelines on structured diagnostic, demographic, and utilization signals, mirroring real-world medical and pharmacy claims data workflows.

EDUCATION

Master’s in Data Science | University of Memphis, Memphis, TN
Bachelor’s in Technology | Indian Institute of Information Technology, Jabalpur, India

SKILLS

Programming & ML Tools:	Python, PySpark, R, SQL, SAS, Java, Scikit-learn, TensorFlow, XGBoost
Machine Learning:	Binary Classification, Regression, Neural Networks, NLP, Ensemble Methods, Predictive Risk Modeling
Healthcare Data:	HEDIS Stars Measures, Medical Claims, EHR Data, SDOH, Admin Claims, Value-Based Care Analytics
Databases:	SQL Server, PostgreSQL, MySQL, Oracle, Snowflake
Visualization:	Power BI, Tableau, Excel; KPI & Scorecard Design, Executive Reporting
Cloud & Data Platforms:	Snowflake, Databricks, Azure AI/ML Studio, AWS (Glue, S3), GCP
DevOps & Engineering:	Git, GitHub, CI/CD Pipelines, Unit Testing, Airflow, Alteryx, ETL Workflows
Soft Skills:	Documentation, Risk Assessment, Internal Consulting, Predictive Analytics.

CERTIFICATES

- Alteryx Designer Core Certification
- AWS Certified Solutions Architect – Associate
- Microsoft Certified: Power BI Data Analyst Associate
- IBM Data Science Professional Certificate
